COLUMN

This is what a Yambaruina (Okinawa rail) is!

Yambaruina, a precious endemic species that lives in the rich forests of Okinawa. It is about 30 cm long with a black-and-white stripe that goes down its throat and belly and a bright red beak. Having little wings with muscles that are not well-developed, they are unable to fly. However, they have excellent leg strength and can run at a speed of 40 km/h. They sometimes cross the road in search of food, so if you are driving, watch out!
